FOR IMMEDIATE RELEASE

Diversified Technology, Inc. Introduces 10 Gigabit Ethernet Switch for ATCA

ATS1936 – New PICMG 3.1 Compliant Switch for DTI's Targa Line of AdvancedTCA Platforms

MVA Conference, San Diego, CA – February 28, 2007 – Diversified Technology, Inc. announces the introduction of the low cost, highly functional ATS1936 Switch Blade. The board features 10G Ethernet transfer speeds.

“I think there is little doubt about the potential for 10G Ethernet, via the ATCA 3.1 sub-specification, to be a watershed event for the telecommunication industry” stated Joe McDevitt, DTI’s VP of Technical Marketing. “The aging install base of telecommunication equipment now, finally, has a chance for true performance increases using standardized form factors.”

“Diversified Technology, Inc. has been helping its NEBS customers with these types of market-changing performance increases for over 15 years by using our cohesive approach to embedded solutions. DTI helps get our customers to market faster with their exact feature needs, and we have now answered the call for a low-cost 10G Ethernet switch.”

About the ATS1936

The ATS1936 is a low cost, highly functional AdvancedTCA switch. It complies with PICMG 3.0 R2.0 ECN002 and PICMG 3.1 Option 1 and Option 9. The ATS1936 features three AMC sites for OA&M, Firewall, and Encryption applications.

By separating the Base and Fabric networks, the ATS1936 provides a separate control plane and data plane. It provides 1Gb Ethernet switching on the 3.0 Base Fabric and the 3.1 Expansion Fabric provides 1Gb/10Gb Ethernet switching. Both of these networks are fully managed with the robust management suite reducing issues integrating your ATCA platforms with the outside world. Both networks support Layer 2 switching as well as Layer 3 routing and IPV6.

Availability and Pricing

Production shipments begin Q2/2007. Single piece pricing for the ATS1936 is \$5,245.00. Call for quantity discounts.

About Diversified Technology, Inc.

Diversified Technology, Inc. (DTI) is an embedded hardware company whose strength lies in the cohesive approach we use with our customers. This cohesive approach means DTI works hand-in-hand with companies to ensure they are getting the best performance, highest reliability, shortest time-to-market and efficient use of computing hardware for their program's embedded application.
